PORR Hochbau West is taking over the construction work.

The building construction team from Gütersloh is responsible for the construction work. Challenges such as the ongoing operation of the district court and the connection of the new building to the existing building require special measures – in particular with regard to sound insulation and maintaining access to the old building. Thanks to the use of LEAN management techniques, the project should be completed efficiently and within the given time frame: the load planner system is used to integrate an adapted phase as well as weekly planning. The close exchange between the local site manager and the subcontractor leads to short distances and short reaction times during the construction process. This minimizes construction delays.

In addition, the team relies on digital solutions for quality assurance: the PlanRadar defects software enables the digital and efficient processing of acceptance and defects. In combination with digital plan management, this ensures a resource-saving and structured construction process.
