Dolomite and rock filling mining

Data and facts

Company	TKDZ GmbH
Type	Demolition
Runtime	10.2012 - in progress
Principal	Various clients

[Project report online](#)

www.porr-group.com

Raw material quality and safety.

Additionally, TKDZ's scope of performance includes the supply of so-called rock filling. This refers to the filling of cavities left over from mining activities using appropriate materials, so-called filling or backfilling materials. Filling serves to secure the ridges and to stabilise the mining pillars of endangered mining chambers. As rock filling, TKDZ uses residual materials from the mining and treatment of mined dolomite rock and adds suitable and authorised materials not sourced from mining activities.

Impressions

Image notes

1

Dolomite and rock filling mining.

Today, TKDZ supplies the construction material and fertiliser industry as well as the chemical industry throughout Europe with important mineral raw materials.

2

Dolomite rock mining.

Rock filling refers to filling cavities left over from underground mining activities with suitable materials.

3

Dolomite rock mining.

Because dolomite rock is mined underground, it has a high purity.
