Elisabeth Selbert House for the German Bundestag in Berlin

PORR Specialist Civil Engineering is responsible for securing the existing structure, planning and executing the excavation pit, PORR Structural Engineering Region East is carrying out the building construction, while sister company pde Integrale Planung is responsible for coordinating the building information modelling. Andreas Kimling, Technical Regional Manager Building Construction Region East, says: "PORR impressed us with its expertise and concrete proposals, in particular how the construction project could be improved and costs saved. Our comprehensive range of services extends from the planning to the realisation of the project and ensures that the client receives the best possible support at every stage."

Sustainable building concept

The building concept is consistently geared towards sustainability and provides for renewable energy generation from geothermal energy and photovoltaics. In addition, certification in accordance with the criteria of the Sustainable Building Assessment System for Federal Buildings (BNB) is being sought. In order to create optimal conditions for this, PORR is planning and building using LEAN management and Building Information Modelling (BIM) methods. These enable a holistic, transparent presentation of the project over the entire life cycle and promote fast decision-making processes, schedule reliability, cost transparency and efficient collaboration. This creates security for everyone involved.
