PORR

Expansion of Europe's most important east-west connection.

In April 2013, PORR started construction work in a joint venture for the first construction section between the Spreeau motorway junction and the Storkow junction over a length of 6 km. In order to ensure traffic routing, the first step was to temporarily widen the carriageway in the direction of Berlin, followed by the basic expansion of the existing directional carriageways.

In the process, the existing directional carriageways were taken up and replaced by a widening to the standard cross-section RQ 29.5 with two lanes and a hard shoulder each in concrete construction.

Analogous to the first construction section, Oevermann was awarded the contract for the construction of the second construction section between the Friedersdorf junction and the Fürstenwalde West junction over a length of 6 km as part of a joint venture. In addition to the basic expansion of the directional carriageways, two bridges are being renewed and the Friedersdorf and Storkow junctions are being reconstructed.

A particular challenge is the limited time between April and September of each year, in order to avoid weather-related influences such as snow and ice on the cramped traffic routing.

Impressions

Image notes

1

Expansion of the A12 motorway between Berlin and Frankfurt/Oder.

Demolition of the old carriageway

2

Expansion of the A12 motorway between Berlin and Frankfurt/Oder.

Earthworks on the A12 motorway.
