Strong teamwork during rehabilitation of the main runway

A logistical masterpiece for the entire team, which required shoulder to shoulder and precise coordination.

Modernisation of the technology

As the client wanted to modernise the technology to meet the requirements of the European aviation authorities, 63 new cable shafts and 21 new foundations for the runway signage were constructed. As part of the official requirements 442, existing shafts in the green areas were also provided with ramps. In this context, the runway lighting was also brought up to date, so that 2,864 new lights illuminate the runway and taxiways.

Everything from a single source

Thanks to the active support of the Düren, Berlin, Eisenhüttenstadt and Osnabrück branches as well as PORR, the ongoing consultation of the in-house laboratory and the strong performance of our subsidiary company CMG Baulogistik, this impressive project was successfully completed on a just-in-time basis.
