New homes in Hamburg's Harburg district

The residential and commercial complex “HAR6” will house 203 micro-apartments and 31 residential units on a floor area of approximately 8,400m². The building, which was designed by Schenk + Waiblinger, is located in a prominent position between Harburg town hall and the railway station. When the construction work has been completed, a flight of steps will lead directly to the Seevepassage pedestrian zone.

Working in cooperation with the employer and the PORR competence teams

Although the complex has 12 storeys at its highest point, the variable heights and loosely structured building units mean that it has none of the bulkiness of the Harburg Center. With its clinker facades facing the street, it blends harmoniously into its surroundings. “The client particularly appreciated our intensive engagement with the project and the way we approached it as a whole”, explains Björn Motzkus, technical branch manager at PORR Building Construction North Region. They were also impressed by the collaborative approach to working with clients and sister companies from the PORR Group. In this particular case, PORR Equipment Services’ site logistics expertise was required to cope with the cramped inner-city location of the construction site, as were the concrete technology experts from PORR’s Düsseldorf branch.

Impressions

Image notes

1

Micro-apartment complex HAR6, Hamburg

The building, designed by Schenk + Waiblinger, is prominently located between Harburg town hall and the railway station.
