Road upgrade with ‘depth’ in Owen

In the first construction phase, Neue Straße was fully upgraded over a length of around 500 metres between Beurener Straße and Wasenweg, with the new surface laid at a depth of 60 centimetres. This was done for the first time, with a carriageway width of 5.5 metres and a pavement on one side. As part of this, the team laid several hundred metres of water and high-pressure gas pipes, medium-pressure gas pipes, power cables and empty conduits.

In addition, the contract included the construction of a new rainwater sewer to separate rainwater and wastewater, the rehabilitation of an existing combined sewer including the shafts, as well as the renewal of street lighting and green spaces. In addition to the city of Owen, the clients included the respective pipeline operators Netze BW, C. Ensinger and Deutsche Telekom.

The top priority of the construction project was to complete the work as quickly as possible while taking into account the 30 residents. For example, emergency supply lines had to be set up while the existing lines were being dismantled. The work for the installation of the new house connections, as well as the courtyard adjustments, were carried out by personal arrangement.

Impressions

Image notes

1

During the road construction project in Owen, A. WAGGERSHAUSER STRASSENBAU GmbH not only built the road, but also laid the new supply lines at the same time.

2

Some of the existing water, gas, telecommunications and broadband supply lines were in a disorganised state in the ground, so they were re-laid directly. The emergency supply lines for gas and water can be seen here.

3

The Neue Straße was extended over a length of about 500 metres to 5.5 metres with a one-sided pavement.
