## 4 meters below the track.

Displacement piles were driven in by heavy pile driving to reach the final depth. The steel pipes were then filled with concrete. Since the piles had to be installed below the auxiliary bridges, they were welded to the corresponding shot lengths at a limited height of less than 4 metres during continuous railway operation.

## Impressions

## Image notes

1

Eisenbahnüberführung, Zepernickner Chaussee

Foundation of up to 20 m long tubular steel piles despite limited height.
