Renovation of masonry and sprayed concrete on concrete components

Further surprising discoveries included large "gravel nests" in concrete pillars and ceilings, which endangered their stability, and cracks in concrete transoms due to war damage. These cracks had to be injected with epoxy resin before repair work to the concrete could be carried out. This very intensive and extensive renovation work led to the construction period lasting from January 2013 to December 2014 and costing 1.003 million euros. The permanent adaptation of our renovation concept to the on-site situation took place quickly and professionally with the client, the planning office responsible and the construction work supervisor. The work was concluded to the complete satisfaction of the client.

Impressions

Image notes

1

Ordensburg Forum Vogelsang Schleiden

An exhibition, education and visitor center was installed in the renovated building.

2

Ordensburg Forum Vogelsang Schleiden

The building from the inside. The ceiling had to be supported in some places for the masonry to be renovated.
