Production Facility for High Energy Photonics

The realisation was carried out according to the latest Siemens standards and environmental criteria. The research campus was implemented using the LEAN approach. pde Integrale Planung, a PORR subsidiary, took on the BIM coordination and supported the building certification according to LEED Silver. The construction process was supported by drone surveys, the intelligent linking of 3D models and 2D details, and the corresponding simulations. This documentation ensures sustainable building operation and optimal facility management.

An energy concept developed in-house should enable the building complex to be operated in an almost CO₂-neutral manner. The HEP centre was completed in 2022, went into operation at the end of 2023 and offers space for around 700 workplaces.

Impressions

Image notes

1

Siemens Healthineers HEP, Forchheim

PORR realised the planning and execution of Siemens Healthineers' High Energy Photonics as the total contractor.

2

Siemens Healthineers HEP, Forchheim

The special feature: the building has high structural dynamic requirements with regard to the production of medical devices.
