# Injection work for masonry renovation

In this way, PORR guaranteed reliable realisation at a consistently high level.

## Stability restored

The grouting work was carried out from February to May 2020. The scope of work included reinforcing the ground-side wall area with injections once the masonry structure had been restored. Six pumps were used to inject a cement mixture through 130 boreholes in order to close cavities and consolidate the old masonry. The injections made the entire wall cross-section structurally effective again

## Impressions

## Image notes
