Deep foundation on 2,800 piles

Two pieces of equipment were used to ensure the tight schedule was kept and to make work even more efficient. This meant that 50 piles were produced on average every day. From October onwards, the work was carried out in parallel to the shell construction work. To enable work to be performed on the second hall, a Vattenfall 110kVa overhead line running between the halls had to be underpinned. This required dismantling the equipment on one side and reassembling it on the other to ensure the distances to the line was maintained.

Impressions

Image notes

1

STILL Logistics Centre, Hamburg

PORR produced a total of almost 2,800 piles with lengths between 11 and 22 metres.
