New bottling plant for the Westfalen Group in Schleswig-Holstein

The contract comprised the turnkey construction of the bottling plant, including a two-storey administrative building and other building sections for order picking and storage. In addition, the branch took on the complete construction of the outdoor facilities, including sewer construction work. The large outdoor facilities were mostly made of asphalt. Some areas were designed with paved, concrete or gravel surfaces. The site is enclosed by a fence consisting of 665 metres of double bar fence and two automatic gates. Thanks to the adherence to the contractually agreed milestones, the on-site plant and electrical infrastructure work was able to start on time. As a result, the bottling plant was fully operational on schedule in autumn 2023.
